Week 2 Update:

1. Establish a paper prototype by comparing and combining various interface sketches [sketches link on the left].
2. Test that prototype with users and make changes according to feedbacks
3. Test the updated design with users
4. Start working on an interactive wireframe and digital mockups (static) to increase the fidelity of our design and prepare for further testing. It's also important to note that while we have established the initial search and results parts of the interface, the buyer/seller interaction elements need further refinement before they can be integrated into the wireframe and mockups. We hope to receive feedback and refine these by Tuesday.
5. Setup the web server, and database
